# Saryarqa Go · Cost and Payback Sheet

ZERTTEX Hackathon 2026 · Case 1 Technology Product · all amounts in KZT · planning assumptions, not a forecast · same numbers as Cost_Payback_Sheet.xlsx (live formulas)

## 1. One-time costs (spent in months 1–3)

| Item | Gate | KZT |
|---|---|---|
| Design & development | 1 | 8,000,000 |
| Localization EN / 中文 | 1 | 1,500,000 |
| Payment integration & testing | 1 | 1,500,000 |
| Trust content: guide videos, photos | 1 | 1,000,000 |
| **One-time total** | | **12,000,000** |

## 2. Monthly costs

| Year-1 recurring + contingency (months 1–12) | Gate | KZT |
|---|---|---|
| Marketing & acquisition | 2 | 4,500,000 |
| Hosting, AI usage, maintenance | 1 | 1,500,000 |
| Pilot & support | 1 | 1,000,000 |
| Contingency | 2 | 1,000,000 |
| **Recurring + contingency total** | | **8,000,000** |
| Per month, months 1–3 (one-time + recurring) | | 4,666,667 |
| Per month, months 4–12 | | 666,667 |
| Per month from month 13 (running cost) Assumption | | 300,000 |
| **Total year 1 (cap 20,000,000)** Case fact | | **20,000,000** |

Staged spending Proposal: the cap is a ceiling. Gate 1 (14,500,000) funds the MVP + pilot; Gate 2 (5,500,000) is released only if pilot metrics are met. AI usage is inside "Hosting, AI usage, maintenance".

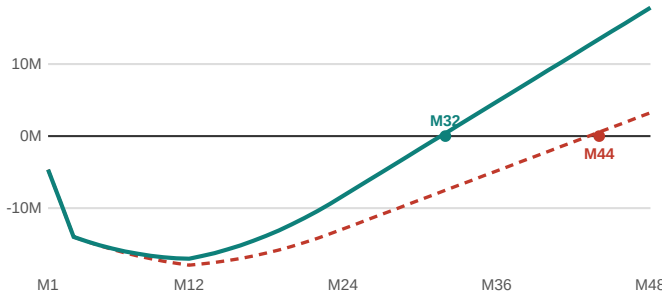
## 3. Revenue assumptions

| | | |
|---|---|---|
| Average price per traveler | 44,000 | Case fact |
| Contribution margin | 30% | Assumption |
| Contribution per traveler (price × margin) | 13,200 | Calculated |
| Launch month / ramp reaches 100% in month | 4 / 24 | Assumption |
| Extra foreign travelers per year (from month 24) | 1,263 | Calculated |
| Worse case: travelers × 0.7 | −30% | Assumption |

Only one income source is counted: the margin on extra foreign travelers (no extras, longer trips or referrals).

## 4. Payback: base vs worse case (−30%)

| | Base | −30% |
|---|---|---|
| Lowest cumulative cash | −17.0M (M12) | −17.9M (M12) |
| Cumulative cash, month 24 | −8.3M | −12.9M |
| **Payback month (cumulative ≥ 0)** | **Month 32** | **Month 44** |
| Cumulative cash, month 48 | +17.8M | +3.2M |
| Break-even travelers (20,000,000 ÷ 13,200) | 1,516 | 1,516 |



base worse case (−30%) cumulative cash, 48 months

| Margin | 20% | 25% | 30% | 35% | 40% |
|---|---|---|---|---|---|
| Payback base | M46 | M37 | M32 | M29 | M27 |
| Payback −30% | > M48 | > M48 | M44 | M38 | M34 |

## 5. Where 1,263 comes from

| | |
|---|---|
| ~4% of 3,400 travelers are foreign today Case fact | ≈ 136 |
| Keep the domestic travelers | 3,264 |
| 30% foreign ⇒ total = 3,264 ÷ 0.7 | ≈ 4,663 |
| 30% of 4,663 = foreign travelers needed | ≈ 1,399 |
| **Extra foreign travelers per year (1,399 − 136)** | **≈ 1,263** |

Check: 150,000,000 ÷ 3,400 = 44,118 KZT, slightly above the stated 44,000 KZT average price. The model uses 44,000 (the careful choice).

Method: costs as in sections 1–2; travelers in month m = 1,263 ÷ 12 × ramp(m), ramp = (m − 3) ÷ 21 for months 4–24, then 1; net = travelers × 13,200 − costs. Payback = first month the cumulative total is ≥ 0. Labels: Case fact = given in the case; Assumption / Proposal = team estimate to confirm with real quotes and company cost data.
